FlexRadio 8000 Series Block Diagram *(Annotated)*

This block diagram shows a modular radio architecture built around several key boards. At its core is a Raspberry Pi Compute Module 4, which provides the main CPU, RAM and high-speed I/O buses for the system. A high-end FPGA on the baseband board performs the intensive signal-processing tasks with hundreds of thousands of logic cells. A dual 16-bit DAC drives the RF transmit chain, while a low-power audio codec with an integrated DSP handles the audio I/O and processing tasks. Control and monitoring are handled by an ADC/DAC and a set of programmable PMICs that generate the various voltage rails. The significant parts list adds further detail. Together, the block diagram and parts list outline how these functional blocks and devices interconnect to deliver the platform's RF, baseband and control capabilities.
